

Oil and Water

When inventor Martin Tirabi builds a machine that converts trash into oil it sends shockwaves through the corporate halls of the oil cognoscenti. Weeks later, Marty and his wife, Ruth are killed in a mysterious car accident. Their son, Gil, a 10-year old physics prodigy is the only one capable of finishing the machine that could solve the worlds energy problems. Plagued with epilepsy from birth, Gil is also psychic, and through dreams and the occasional missive from his dead father he gets the push he needs to finish the job. Meanwhile, Bicky Coleman, head of Akanabi Oil is doing his best to smear the planet in it. From a slow leak in the Gulf of Mexico to the most devastating oil spill the Delaware River has ever seen, Akanabis corporate practices are leaving oily imprints in their wake. To divert the tide of bad press, Bicky dispatches his son-in-law and Chief Engineer, David Hartos to clean up his mess. A disillusioned Hart, reeling from the recent death of his wife and unborn child, travels to Philadelphia to fulfill his father-in-laws wishes. Theres no such thing as coincidence when Hart meets Gil and agrees to help him finish Martys dream machine. But how will he bring such a revolutionary invention to market in a world reliant on fossil fuels and awash in corporate greed? To do so, Hart must confront those who would quash the project, including his own father-in-law. Youll find murder, mystery, and humor as black as fine Arabian crude filling the pages of Oil and Water. The characters are fictional, but the technology is real. What will we do when the oil runs out? Open up and see.
